Claims Allowed

Claims 1-6 are allowed. The claims are allowable because the prior art does not anticipate nor render obvious the invention of a planetary gear unit in an electrically operated disc brake including the features of a first planet wheel between a sun wheel on a first shaft and a first internal gear in a housing, a crank arm supporting the first planet gear and connected to a second shaft coaxial with the first shaft, a second planet wheel between a second sun wheel on the second shaft and a second internal gear in the housing, and an outgoing gear coaxial with the first and second shafts and connected to the second planet wheel, and wherein a bearing is disposed between the first and second shafts and a further bearing is disposed between the outgoing gear and the second shaft.

Prior Art Discussed

The examiner has considered the references cited in Applicant's Information Disclosure Statement filed June 4, 2004. None of the references show all of the features of the claimed invention.

The references cited by the examiner are deemed pertinent to applicant's disclosure. Yamato '859 shows an electrically actuated disc brake with planetary gearing but does not show any bearings between the first and second shafts, among other defects. Rieth '836 shows another electrically actuated brake with planetary gearing but no bearings between first and second shafts are shown, among other defects. De Vries '308 shows an electrically actuated brake with planetary gearing but has only one gear stage, among other defects. Severinsson '435 appears to be another patent by the same inventor on his disc brake, but does not show any details of the planetary gearing in the patent. Jungbecker '249 shows another electrically actuated

disc brake but only has one internal gear, among other defects. Hilzinger '602 shows yet another electrically actuated disc brake but also does not show a bearing between a first and a second shaft, among other defects.
